

**Amendments to the Claims**

1. (Currently Amended) A method of reprinting at least one page of a printed document, the method comprising:

- printing a print job on a printer to generate the printed document;
- determining that at least one page of the printed document includes an error on the page;
- instructing a user to load the printed document into an inserter tray on the printer;
- processing each page of the printed document from the inserter tray on the printer to an output tray on the printer by:
  - determining if the page includes the error;
  - if the page includes the error, then discarding the page, reprinting the page from the print job to generate a new page, and sending the new page to the output tray; and
  - if the page does not include the error, then sending the page to the output tray.

2. (Previously Presented) The method of claim 1 wherein determining that the at least one page of the printed document includes the error further comprises:

- querying the user as to whether an updated copy of the printed document is available.

3. (Previously Presented) The method of claim 2 further comprising:

if the updated copy of the printed document is available, then automatically identifying the at least one page having the error;

if the updated copy of the document is not available, then allowing the user to identify the at least one page having the error.

4. (Previously Presented) The method of claim 3 further comprising:

determining whether the error exists; and

notifying the user of the error.

5. (Previously Presented) The method of claim 1 wherein the error includes an update to the print job after printing the print job.

6. (Previously Presented) The method of claim 4 wherein the error includes a printer jam.

7. (Cancelled).

8. (Currently Amended) A system for reprinting at least one page of a printed document, the system comprising:

a printer configured to print a print job to generate the printed document~~[[;]]~~ and  
~~software configured~~ to determine that at least one page of the printed document includes  
an error on the page;

a user interface configured to instruct a user to load the printed document into an inserter  
tray on the printer;

the ~~software~~ printer further configured to process each page of the printed document from  
the inserter tray on the printer to an output tray on the printer and to determine if the page  
includes the error;

the printer ~~software~~, responsive to the page including the error, further configured to  
discard the page, reprint the page from the print job to generate a new page, and send the new  
page to the output tray; and

the printer ~~software~~, responsive to the page not including the error, further configured to  
send the page to the output tray.

9. (Currently Amended) The system of claim 8 wherein the user interface ~~software~~ is further  
configured to query the user as to whether an updated copy of the printed document is available.

10. (Currently Amended) The system of claim 9 wherein the printer software is further configured to identify the at least one page having the error if the updated copy of the printed document is available and to allow the user to identify the at least one page having the error if the updated copy of the printed document is not available.

11. (Currently Amended) The system of claim 10 wherein the printer software is further configured to determine whether ~~an~~ the error exists and to notify the user of the error.

12. (Previously Presented) The system of claim 11 wherein the error includes a printer jam.

13. (Previously Presented) The system of claim wherein the error includes an update to the print job after printing the print job.

14. (Cancelled).
